

Assignment-5

Web application with social login

A web application for popular services in a city can be known by using this application. This application works with all over the united states.

To develop this web application, I have used two API's for searching the popular services in the city and Reviewing them.

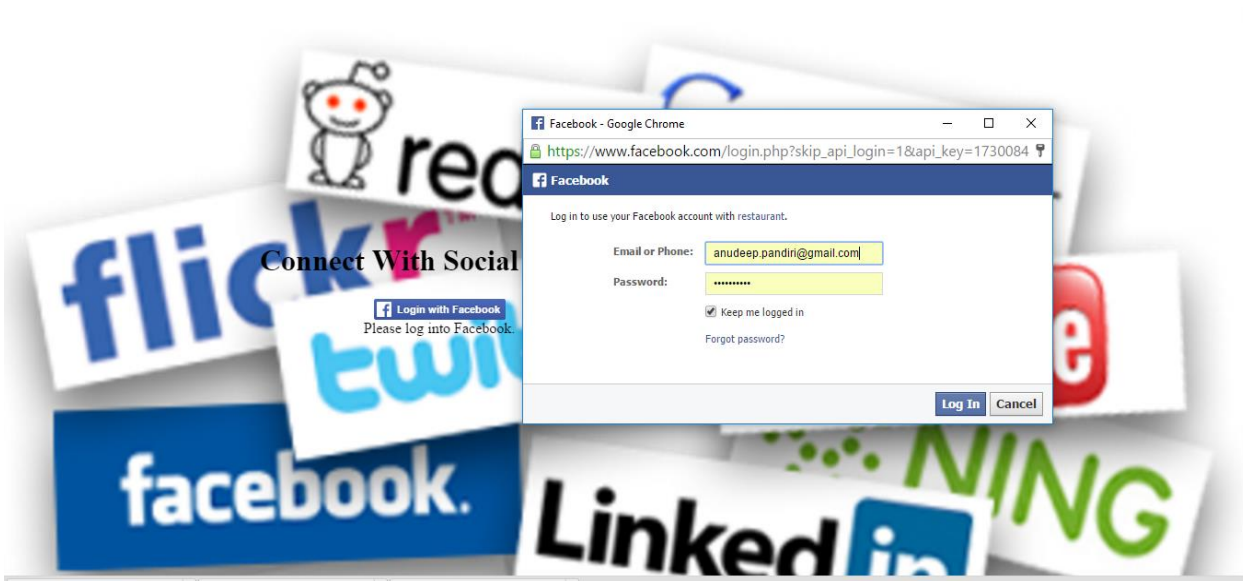

For this website any individual can login using the social website Facebook account. So, that everyone can search for the services after login

Social login page for the website:

The above showing is the login page for the web application using Facebook login. Each and every individual have to access permissions from facebook.developers.com to use the application.

Next on clicking the login button the further window will pop up and we have to give our credentials of the Facebook.

After logging in user can access the website services.

The home will be displayed:

The user entered the city name Houston and the results are displayed:

After the popular services search each service has given its review by using Alchemy API.

The below show screenshot is the result for review for a service:
